Indigenous student Opportunity: Animal Science Field

Location: Jersyville, Hamilton, Ontario

Organization: Agriculture and Agri-Food Canada

Details: The student position we are looking to fill is at the CPMA’s Equine Research Facility located in Jerseyville.

Full time student for the summer (or a couple part time), and will have part time opportunities throughout the school year.

Duties: The individual(s) will participate in the daily care of our research herd (feed, water, cleaning, grooming, etc.) as well as general barn maintenance tasks. They would have the opportunity to see how a government research facility operates and the regulations and record keeping that are necessary. They would be able to see research projects taking place and learn how samples are collected and processed. It is a great opportunity for anyone in the animal science field.

As the position requires daily care of the horses, for safety reasons we need students that have some horse experience. Training will be provided, however basic horse knowledge is required.
