"Salah Uddin Khan has a PhD in Public Health with a focus on One Health approaches from the University of Florida. Dr. Khan is currently working as a CIHR Health System Impact Fellow jointly at the Public Health Agency of Canada and the University of Guelph focusing on climate change and vector-borne diseases research. His primary research focus is on understanding the epidemiology of infectious diseases of One Health significance and the integration of multidisciplinary approaches to solving complex health issues. Dr. Khan has published more than 46 peer-reviewed articles, and secured research and fellowship grants from multiple finding bodies including the CIHR, the National Academy of Science (US), and US CDC."
