Nutrient Profile

MEGALAC®
Rumen Bypass Fat

Years of research and testing led to the development of MEGALAC – the first bypass fat and most efficient energy source on the market. MEGALAC enhances performance by:

- Delivering rumen bypass fats to the small intestine for maximum utilization
- Providing the extra energy needed to achieve peak production levels
- Improving body condition

Compared to all other bypass fats, MEGALAC has the highest Net Energy for Lactation (NE_L) value:

- The only bypass fat with an actual USDA-measured Net Energy for Lactation (NE_L) at 2.96 Mcal/lb., or 270% Total Digestible Nutrients
- More than 85% digestible in the small intestine
