BECOME A HILL'S® SCHOLAR

WHAT IS A HILL'S® SCHOLAR?

The Ontario Veterinary College has joined hands with Hill's® Pet Nutrition to create a unique experiential learning opportunity for Canadian veterinary students in the final year of their DVM program.

Hill's Scholars will participate in a primary healthcare rotation at the Hill's® Pet Nutrition Primary Healthcare Centre (Hill's® PHC) at the world-class Ontario Veterinary College at the University of Guelph.

Hill's® Pet Nutrition has generously agreed to fund two candidates (\$5,000 CAD each) to compensate for time and travel.

The rotation will normally be three weeks in length.

ABOUT THE HILL'S® PET NUTRITION PRIMARY HEALTHCARE CENTRE

The Hill's® PHC is a state-of-the-art companion animal hospital. Three veterinarians, registered veterinary technicians, client service associates and healthcare team members provide exemplary primary care to approximately 1,300 clients and 1,700 patients annually. The facility has digital radiography, ultrasound, dentistry and rehabilitation facilities and IDEXX in-house laboratory equipment.

ABOUT THE ONTARIO VETERINARY COLLEGE

The Ontario Veterinary College at the University of Guelph is a world leader in advancing veterinary medicine and health research for the betterment of animals, people, and our planet. OVC is ranked first in Canada, third in North America and seventh worldwide for veterinary science in 2019 (QS ranking).

As a member of the Hill's® PHC team during this rotation, students will:

- work in a modern learning-oriented community practice alongside veterinary instructors and other final year veterinary students from OVC;
- be given the opportunity to work up cases, interpret test results from a full suite of in clinic diagnostics, generating differential lists and treatment plans;
- assist in anesthetic and surgical procedures reflective of a general practice case load including spays, neuters, and other surgeries;
- assist in dental radiography and COHATs (comprehensive oral health, assessment and treatment plans);
- gain exposure to digital radiography, ultrasonography and rehabilitation therapy in the full on-site rehabilitation suite;
- be heavily integrated into the entire appointment process, receiving feedback in a supportive and fun environment;
- become familiar with wellness plans and gain the confidence to perform a nutritional assessment and obtain nutritional compliance with clients;
- experience being the lead veterinarian on a team and learn the value of monitoring business metrics.
